

Kestrel Home Appliances - Operations Policy v4.1

Internal. Owner: D2C Operations.

§1 Scope

This policy covers the Kestrel service desk: intake, routing, resolution and warranty operations.

§3 Routing

Inbound requests (IVR, chat, WhatsApp, email) are assigned to a team queue at creation by the vendor routing bot. Agents transfer requests that reached the wrong team. The team that closes the request is recorded as the final team.

A request belongs to Billing only when the problem is the payment itself (invoice, GST, double charge, refund of a payment, EMI conversion). A customer mentioning that they have paid does not make it a billing request.

§4 Costs used for decisions

Each transfer between teams costs **Rs 305** in handling time. A misrouted request also generates on average one extra customer contact at **Rs 260**.

Technician visit: Rs 540. Vendor routing bot licence: Rs 3.2 lakh per year.

§5 Team changes

From 15 Jan 2026 the Installations team became Installs & Demo, and Consumables became Filters & Consumables. Responsibilities did not change.

§9 Systems and timestamps

Until 30 Sep 2025 service and order operations ran on the legacy Zoho Desk instance. From 1 Oct 2025 everything runs on the Kestrel CRM. Legacy records were migrated in bulk; the *source* column says which system a row came from.

All timestamps in exports are Indian Standard Time as displayed in the CRM, **except** resolution events imported from the legacy Zoho event log, which were stored in UTC and were not converted during migration.

§10 Data handling

Customer and operational data may be shared with approved vendors for analysis. It must not be published, uploaded to public repositories or shared beyond the engagement team.
